KH1000

Basic Features

Heavy Duty Cutting & Productivity
Horizontal Machining Center

Column Moving Structure

The column moving Z-axis prevents table sagging when loading or machining. Also, double-wall structure of the column minimizes thermal displacement and maximizes cutting force from X-axis which provides excellent performance in heavy duty cutting.

Powerful Cutting Capability

- ⦿ Travel (X/Y/Z axis) : **2,100/1,350/1,400** mm (**82.7"/53.1"/55.1"**)
- ⦿ Max. Load Capacity : **2×3,000** kg (**2×6,614** lb)

Basic Features

01

8-Face Contact Y-axis Guideway

Spindle head contacts 8 faces of Y-axis guideway. This new method allows cutting forces generated by the spindle head to be absorbed by the Y-axis box guideways which improves heavy duty cutting ability, accuracy, and surface finish.

02

Box Guideway for All Axes

Box guideways effectively offset vibration from travel axes enabling the machining of high precision products.

Air Semi-Rising Slideway

By applying the **air semi-rising slideways**, the load on the Z-axis slideway is decreased. Therefore, positioning and repeatability accuracy can be maintained for a long time.

Spindle

The spindle applies ultra precision cylindrical roller bearings, significantly reducing spindle noise and vibration.

This rigid structure, along with its powerful tool clamping force leads to powerful cutting ability.

03

Shuttle Type APC

Productivity is improved through Shuttle Type APC that makes large-sized workpiece machining easier.

04

02

KH1000

Powerful Cutting Spindle

High Productivity Achieved
with High Rigidity and High Precision

Gear Driven Spindle

KH1000 is designed with a 2 step gear driven spindle(3 step gear driven spindle:Option), which provides high torque at low rpm and stability at high rpm.

The AC spindle motor with max. power of **26kW**(35HP) and max. speed of **8,000rpm** is suitable for heavy duty cutting and high speed machining. The spindle's oil cooling system is designed to minimize thermal displacement.

Before Clamping

After Clamping

Dual Contact Spindle

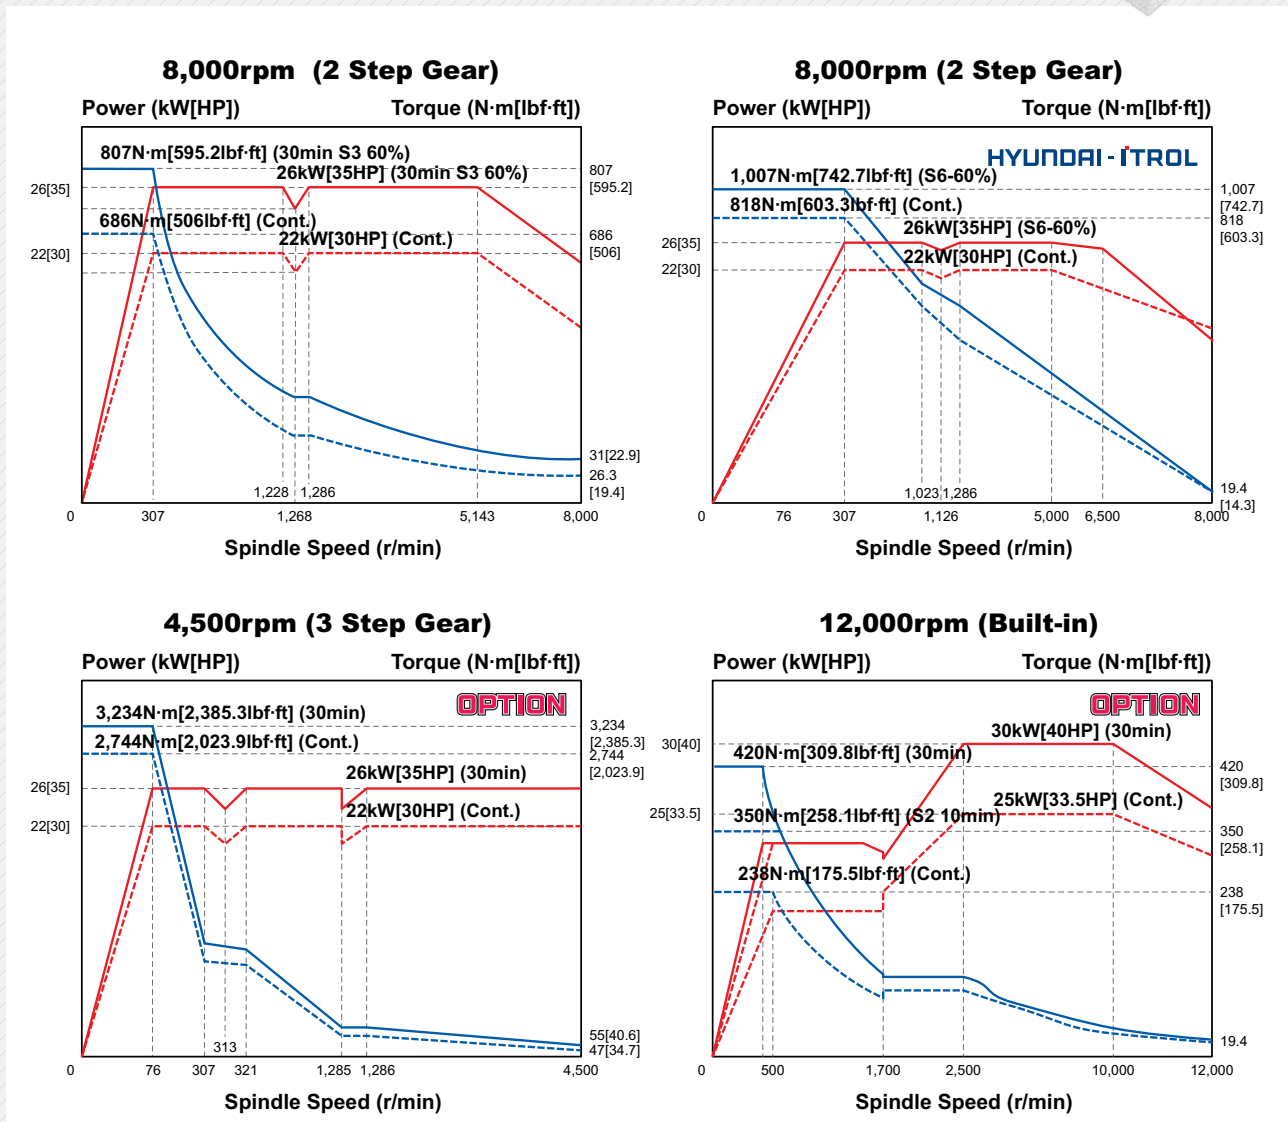

The Big Plus spindle system (BBT) provides dual contact between the spindle face and the flange face of the tool holder.

The increase in standard diameter improves stiffness and ATC repeatability, and Z-axis displacement is prevented which further extends tool life.

Built-in Spindle **OPTION**

By using ultra precision class angular ball bearings, fast acc/ deceleration of the main spindle is achieved. The spindle head is designed to minimize heat displacement therefore reducing heat generation and making it possible to maintain high accuracy. Spindle temperature is controlled by the using spindle oil chiller.

03

KH1000

APC & Pallet

High Productivity Achieved
with High Rigidity and High Precision

Adaptation of Shuttle Type APC

KH1000 is equipped with a shuttle type APC(Automatic Pallet Changer) as standard.

APC Safety Sensors

Safety sensors on APC covers detect the presence of operators near APC. When a contact is detected on the beam, APC automatically stops. This helps establish a safe work environment.

Enhanced Convenience of APC

An additional control panel is provided for APC operating.

Peripheral Device

Table

The powerful clamping by clamping plate is suitable for heavy duty cutting. Precise indexing is possible with 1° index table(0.001° : Option) which uses high precision couplings.

Work Area

Pallet Brush

Pallet brush is added to remove chip during pallet change.

Air Clearing System

During the pallet change cycle, strong air blasts from the taper cones on the machine table helps remove chips to provide clean surface for locating the pallet. This ensures high accuracy of pallet positioning and guarantees optimum rigidity.
