## HIGH-PRECISION STRUCTURE

### Optimal Structural Analysis

KF760BM/960BM is designed to have optimal structure through Hyundai WIA's unique structural analysis. In particular, enhancement of bed and column's rigidity makes excellent performance even in heavy duty cutting.

### Distance from Table Top to Spindle Nose

KF760BM (A~B)

**200~920** mm (7.9"~36.2")

KF960BM (A~B)

**200~1,050** mm (7.9"~41.3")

## INCREASED RIGIDITY FOR STABLE MACHINING

We enhanced the rigidity of bed and column compared to the previous model for the better absorption of vibration.

In particular, this exhibits the optimal performance for mold machining through increased ribs and additional weight based on unique interpretation technique of Hyundai Wia.

# HIGH RIGIDITY AND STABLE CONVEYING STRUCTURE

## GUIDE WAY

### All Axes Box Guideway

Box guideways effectively offset vibration enabling the machining of high precision products. The travel load is spread evenly on the surface of guideways. This enhances stability and rigidity allowing high performance heavy duty cutting.

### 4 Slideway

KF760BM/960BM designed with 4-slideway of wide Y-axis to minimize the displacement by the over-hang, and it is possible to perform high-precision heavy-duty cutting.

### Air Semi-Rising Slideway

By applying the air semi-rising slideways, the load on the X/Z-axis slideway is decreased. Therefore, positioning and repeatability accuracy can be maintained for a long time.

### 10-face Contact Y-axis Slideway (KF960BM)

The table is supported at all times by 10-face contact box guideways. This allows for a maximum table load of 4,500 kg (9,921 lb) without any distortion in the table.

## DOUBLE ANCHORED BALL SCREW

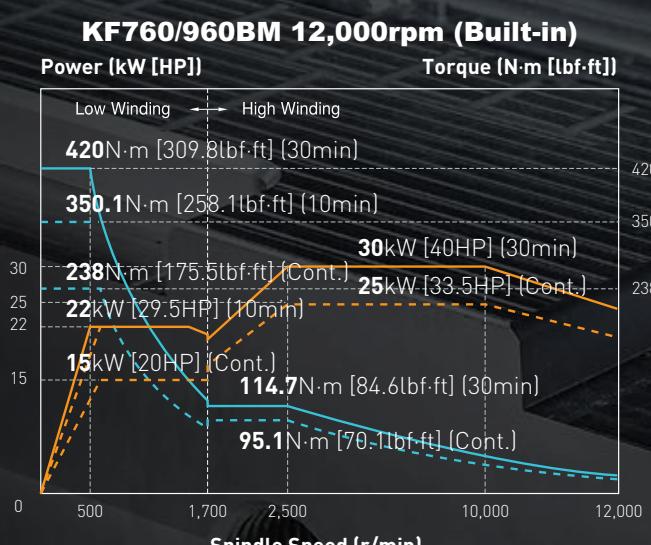

The pretensioned ball screw minimizes the expansion and contraction according to the heat and further reinforces the rigidity by the double anchor support method.

In addition, the coupling of the ballscrews and the highly reliable digital servo motors are connected by metal plate couplings, to reduce coupling breakage and backlash.

# 03 HIGH PRECISION SPINDLE

Excellent machining performance with high-precision spindle

# HIGH-PERFORMANCE, HIGH-PRECISION SPINDLE

## SPINDLE

### High-precision Built-in Spindle

By using ultra precision angular ball bearings, fast acceleration and deceleration of the main spindle is achieved. The spindle head is designed to minimize the heat displacement of main spindle, and with the use of hydraulic Power tool lock system, the machining stability has increased.

### Head Body Weight Reduction

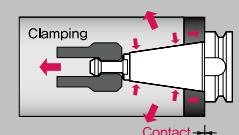

Especially, over-hang problem is decreased due to weight reduction(10%) of main spindle compare to the previous model to achieve high-quality mold machining.

### Spindle Cooling

The spindle cooling system minimizes thermal displacement which can happen during lengthy machining operations, and offers continued accuracy based on the thermal stability.

### Dual Contact Spindle

The Big Plus spindle system (BBT50) provides dual contact between the spindle face and the flange face of the tool holder.

- ❖ The increase in standard diameter improves rigidity and ATC repeatability, and Z-axis displacement prevention further extends tool life.

## THROUGH SPINDLE COOLANT OPTION

Through Spindle Coolant is exceedingly useful when drilling deep holes. It helps increase the lifetime of the tool, while decreasing cycle time.
